

Firewall Rules Analyzer

DORITA technology
helps you comply with
PCI DSS certification

What is Firewall Rules Analyzer?

Firewall Rules Analyzer is a service **that allows you to review and analyze the firewall rules configured** in an organization to **ensure compliance with PCI DSS 4.0**. This service uses BOTECH's proprietary DORITA technology, developed by Marcelo Velasco.

What is PCI DSS 4.0?

The Payment Card Industry Data Security Standard (PCI DSS) is a **set of security** requirements designed to ensure that all companies that process, store or transmit credit card information maintain a secure environment. **PCI DSS version 4.0**, released in March 2022, introduces **significant changes and enhancements** to address emerging threats and advanced technologies.

What need does it cover?

Firewall Rules Analyzer enables **periodic reviews of firewall configurations**, ensuring that rules comply with security and regulatory requirements. This helps **identify potential vulnerabilities and ensures that configurations are reviewed** at least every six months, as required by PCI DSS 4.0.

Benefits

Regulatory compliance

- **Firewall rule monitoring:** Ensures semi-annual reviews of firewall configurations, complying with PCI DSS 4.0.
- **Detailed reports:** Provides complete and accurate reports of remediation actions, identifying IPs in and out of PCI DSS scope, surpassing other similar tools in detail and accuracy.

Security and control

- **Identification of trusted networks:** Helps distinguish between trusted and untrusted networks, improving access control.
- **Traffic protection:** Ensures that inbound and outbound traffic is restricted to only what is necessary, denying all unauthorized traffic and thus strengthening overall cybersecurity.

Operational efficiency

- **Automation of reviews:** Facilitates the review of firewall rules, reducing the manual time and effort required, optimizing the organization's resources.
- **Integration with vSOC:** The service is managed by BOTECH's vSOC, ensuring continuous and professional monitoring, and complementing other cybersecurity solutions such as vSOC ThreatGuard+ and SIEMaaS.

Additional features

- **Proprietary technology:** DORITA is a technology developed internally by BOTECH, ensuring total control and high customization of the service.
- **Additional service:** Although this is an additional service, it integrates effectively with other BOTECH solutions, enhancing the company's overall security offering.

PCI DSS 4.0 compliant with automated semi-annual reviews.
