

Adaptive Training in Secure Development

Learning Experience for Developers

A training experience designed for developers who want to advance with **discernment, practice, and consistency.**

Learn secure development through a guided journey that combines technical content, hands-on practice and progress tracking to help you make better decisions in your daily work.

What is this training experience?

This **learning platform** is designed so that technical professionals can develop knowledge and skills in secure development through a **structured, practical experience tailored to their professional context.**

Unlike a traditional content library, the platform organizes learning through guided paths, visible progress, and interconnected activities to facilitate consistent and coherent development.

What does this service entail?

The experience combines guided content, audiovisual resources, assessment activities, hands-on labs, and review sessions that help consolidate knowledge progressively.

The platform allows you to customize a learning **path tailored to your professional profile, primary programming language, level of experience, and specific needs** related to PCI DSS, creating a more relevant experience for each participant.

Additionally, **progress is tracked at all times** so that each person can pick up exactly where they left off, without losing context or continuity.

What need does it address?

Many technical professionals have access to a wealth of information, but lack a clear framework that allows them to move forward in an organized manner and apply what they've learned with confidence.

This program addresses that need by providing a clear roadmap, practical, context-specific training, and ongoing support that transforms security concepts into criteria applicable to daily work.

The goal is not merely to complete modules, but to ensure that each session provides useful knowledge, analytical skills, and better technical decisions.

Benefits

Clear and Visible Path

From the moment you log in, you know where you are, what you've completed, and what the next recommended step is.

Guided labs

Concepts are applied to specific scenarios to facilitate understanding and application.

Continuous progress

Your progress is automatically saved so you can resume the training at any time without losing your place.

Learning assessment

Quizzes and activities allow you to validate your knowledge before moving on to the next module.

Personalized experience

The learning path is tailored to your professional profile, primary technologies, and knowledge level.

Targeted reinforcement

Key content can be reviewed and reinforced as needed without disrupting the learning pace.

Structured learning

Practical application
