

Automation through Artificial Intelligence to identify and mitigate risks.

What is BOTECH Prime Plan?

BOTECH Prime Plan is a **comprehensive cybersecurity solution designed for small and medium-sized businesses**. It combines automation through generative Artificial Intelligence and BOTECH's expertise in cybersecurity to **mitigate risks, comply with key regulations** such as ISO 27001 and GDPR, and ensure the operational resilience of organizations. In addition, **it is adaptable and scalable**, providing tailored security plans for every need.

What does this service consist of?

Prime Plan follows a structured process in **four phases**: data collection through a conversational environment with a chatbot, the development of customized plans based on the information obtained, the development of continuity plans to guarantee operations, and validation to ensure that the proposed solutions are correct. The plans generated include **risk mitigation strategies, resource optimization** and incident recovery measures. Furthermore, Prime Plan is **hosted in the cloud**, eliminating the need for physical infrastructure and ensuring continuous scalability.

What need does it cover?

Prime Plan addresses **the growing threats of cyber-attacks**, enabling small and medium-sized companies to protect their digital assets **without making large investments**. It facilitates regulatory compliance, optimizes resources and improves incident response capabilities, ensuring business continuity. Prime Plan is ideal for **organizations looking for affordable and effective solutions** to cyber threats.

Benefits

Risk reduction

Implementation of **customized measures that mitigate critical vulnerabilities**, protecting both internal systems and sensitive data against possible attacks.

Regulatory compliance

Alignment with all types of international standards such as ISO 27001 and GDPR, reducing exposure to regulatory sanctions and strengthening the company's image with partners and customers.

Resource optimization

Automation of key processes that **minimizes time spent on repetitive tasks**, allowing IT teams to focus on strategic activities.

Guaranteed scalability

A flexible model that grows with the business, adapting to new threats and requirements without the need to modify the existing infrastructure.

Operational resilience

Well-structured recovery plans that ensure business continuity, even in the event of major incidents, minimizing the impact on corporate services.

Who is Prime Plan aimed at?

- **SMEs of all sectors:** Provides accessible and effective protection.
- **Security and compliance managers:** Enables agile and centralized management.
- **IT teams:** Facilitates risk monitoring and mitigation.
