

# How can you protect your digital assets and systems against potential threats and cyberattacks?

Access expert cybersecurity leadership without hiring permanent staff

## What is BOTECH vCISO?

BOTECH vCISO is a virtual CISO service that offers expert advice on information security to companies that need to protect their digital assets but do not have a full-time internal manager. Backed by BOTECH's team of experts, **vCISO designs, implements, and monitors cybersecurity strategies tailored to each organization's reality.** This service provides companies with flexible and efficient strategic and technical leadership in cybersecurity to address growing risks, complex regulations, and changing digital environments..

## What is the implementation process like?

### Plan

- ✓ Review of objectives
- ✓ Cybersecurity committee
- ✓ Identification of risks and areas for improvement
- ✓ Annual risk assessment

### Act

- ✓ Initial assessment and vulnerability analysis
- ✓ Cybersecurity strategy
- ✓ Application inventory and criticality
- ✓ Presentation of results and maturity

### Do

- ✓ Implementation of improvements
- ✓ Biweekly or monthly follow-up
- ✓ Definition of roles and work plan
- ✓ Activity report

### Check

- ✓ Review of metrics
- ✓ Quarterly evaluation of indicators
- ✓ Project monitoring

# Benefits

## Access to cybersecurity experts

Your organization will have **highly qualified professionals** with experience in critical sectors and up-to-date knowledge of emerging threats.

## Flexibility and cost savings

**Avoid the costs of a full-time internal CISO** by accessing a service that can be scaled according to the needs of each stage.

## Strategic and operational vision

Combine **long-term planning with immediate tactical actions** to strengthen the organization's security posture.

## Objective and independent assessment

Impartial analysis of the security status **and recommendations in line** with industry best practices.

## Regulatory compliance assured

**Expert support in alignment** with frameworks such as ISO 27001, NIS2, GDPR, and other specific regulations.

## Who is vCISO aimed at?

- **SMEs** that need expert support but lack internal resources.
- **Companies undergoing digital transformation.**
- Organizations with **regulatory requirements.**
- Companies that **have suffered security incidents.**
- **Executives** seeking external and impartial evaluation.
