Complete security solution for companies in any sector with rapid detection and response capabilities.

What is VSOC PCI?

The Virtual Security Operations Center (vSOC) is an advanced security platform that offers **real-time protection** through a managed security monitoring and analysis service that **operates 24/7.**

Easy to implement and customizable, it is designed for organizations that need continuous visibility and expert support in managing cybersecurity events and incidents, without having to maintain their own SOC.

Why does your organization need PCI VSOC?

- First virtual SOC specializing in PCI.
- Managed by a team of experts in security and PCI DSS compliance.
- We operate 24/7 with global coverage through a team distributed across Mexico, Spain, and Venezuela.
- We have Level 1, 2, and 3 analysts trained in incident detection, analysis, and escalation.
- We do not manage customer systems, but we deliver accurate information to facilitate containment and eradication.

VSOC PCI helps you comply with PCI DSS regulations and avoid losses

We accompany the client in their **PCI DSS audits**, explaining the model, providing evidence, and answering the auditor's questions at no additional cost. A major advantage of this service is that it helps and supports clients in complying with PCI DSS regulations, **specifically in the following requirements:**

Requirement 2: Secure configurations.

Requirement 6: Vulnerability and change management.

Requirement 8: Role-based access control.

Requirement 10: Event auditing and traceability.

Why choose BOTECH?

24/7 service managed by experts	**Extensive technological support**	**Proactive and contextual alert generation model**
Support in audits and PCI DSS compliance	**Development of parsers and dashboards at no additional cost**	**Direct and clear communication with the customer**

Real-time information and alerts to ensure your organization is protected at the highest level

✓ **Email:** for all alerts based on criticality.

✓ **Phone calls:** for critical alerts previously defined with the customer.

✓ **Slack:** Optional integration for quick and lightweight notifications.

✓ **Daily reports:** All alerts and incidents detected the previous day are sent.

✓ **Monthly reports:** Analysis of the month, with recommendations, trends, and points of attention.

✓ **Patterns:** System that detects patterns that may go unnoticed with isolated alerts.

Multiple environments

Capable of monitoring, alerting, and correlating events across multiple environments:

- Infrastructure and cloud: Linux, Windows, AWS, Azure.
- SaaS and cloud security: Office365, Trend Micro, Netskope, Bitdefender.
- Firewalls and networks: Palo Alto, Cisco, Fortinet, Check Point.Databases: PostgreSQL, MSSQL, MariaDB.

We develop custom dashboards and parsers when native tools do not support customer logs, at no additional cost.
